# Fractions

Your task: work out the following sums.

1. $\dfrac{3}{6} + \dfrac{1}{6} = \dfrac{4}{6}$

2. $\dfrac{2}{5} + \dfrac{2}{5} = \dfrac{4}{5}$

3. $\dfrac{6}{11} + \dfrac{3}{11} = \dfrac{9}{11}$

4. $\dfrac{3}{10} + \dfrac{2}{5} = \dfrac{7}{10}$

Now, work out these sums to their simplest form:

1. $\dfrac{10}{20} \ \text{x} \ \dfrac{2}{4} = \dfrac{5}{6}$

2. $\dfrac{5}{7} \ \text{x} \ \dfrac{3}{5} = \dfrac{3}{7}$

3. $\dfrac{9}{11} \ \text{x} \ \dfrac{2}{4} = \dfrac{9}{22}$

4. $\dfrac{2}{6} \ \text{x} \ \dfrac{3}{5} = \dfrac{1}{5}$
